

TOP AI TRENDS AND DATA ANNOTATIONS FOR 2021

The applications of Artificial Intelligence will continue to explode in the new decade ahead, and data annotation solutions will support the journey. Over 86% of respondents of a PwC survey say that AI will be a "mainstream technology" at their company in 2021. Here are some of the biggest ways in which AI will drive innovation across industries.

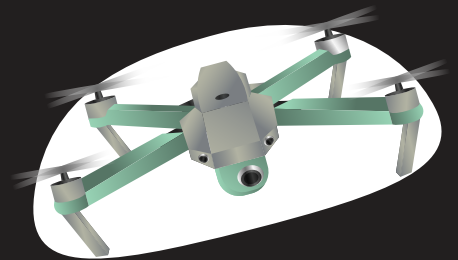

1 Keeping an eye on infrastructure and assets from the sky

2 Analysing CT scans with record speed and accuracy

3 Monitoring crowds in the COVID era

4 Automating rule-based repetitive accounting processes

5 Bringing critical pharmaceuticals to market quicker

6 Monitoring patient progress from a safe distance

7 Putting secure cars with advanced infotainment on the road

8 Detecting and preventing digital security breaches

9 Tracking farm activity to enable improved food production

10 Simplifying property & damage inspection for insurance
